Web of Science

Web of Knowledge

The screenshot shows the Thomson Reuters Web of Science homepage. The top navigation bar includes links for HOME, PRODUCTS & SERVICES, NEWS & IDEAS, and INVESTOR RELATIONS. Below this, a sidebar on the left lists various services and resources, including Biopharmaceutical Business Intelligence, Scientific Research, Intellectual Property, and Scholarly Research, Publishing and Analysis. The main content area displays the 'SCIENCE' section and a list of products and services.

The screenshot displays the Thomson Reuters Web of Knowledge interface, featuring a journal analysis report for the 'УКРАИНСКИЙ БИОХИМИЧЕСКИЙ ЖУРНАЛ' (Ukrainian Biochemical Journal). The report includes a table of general indicators and a table of indicators by year.

УКРАИНСКИЙ БИОХИМИЧЕСКИЙ ЖУРНАЛ
Институт биохимии им. А.В. Палладина НАН Украины (Киев)

Общие показатели:

Общее число статей из журнала в РИНЦ	210
Общее число выпусков журнала в РИНЦ	82
Среднее число статей в выпуске	3
Число выпусков в год	6
Суммарное число цитирований журнала в РИНЦ	690
Место в общем рейтинге SCIENCE INDEX за 2010 год	2279
Место в рейтинге SCIENCE INDEX за 2010 год по тематике "Химия"	57

Показатели по годам:

Название показателя	2008	2009	2010	2011
Число статей в РИНЦ	11	11	30	9
Показатель журнала в рейтинге SCIENCE INDEX			105	
Двухлетний импакт-фактор РИНЦ				
Двухлетний импакт-фактор РИНЦ без самоцитирования				
Число статей, опубликованных за предыдущие два года				
Число цитирований статей предыдущих двух лет из них самоцитирований				
Двухлетний коэффициент самоцитируемости, %				
Пятилетний импакт-фактор РИНЦ				0,075
Пятилетний импакт-фактор РИНЦ без самоцитирования				0,075

On the right side of the interface, there is a section for 'INTRODUCING THE DATA CITATION INDEX™ ON WEB OF KNOWLEDGE™' and a 'Data Citation Index' button. Below this, there is a 'FOLLOW US ON FACEBOOK' section with the Thomson Reuters Web of Knowledge logo and a Facebook link.

Specialty Surgery

ORIGINAL ARTICLE

Fibrinolysis or Primary PCI in STEMI
 April 11, 2013 | P.W. Armstrong and Others

Published Online: March 10, 2013

Reperfusion strategies with fibrinolysis or primary PCI were compared in this trial involving patients with ST-segment elevation myocardial infarction (STEMI). The two methods had similar efficacy, but there was more intracranial bleeding in the fibrinolysis group.

☐ CME | ☐ Comments

CLINICAL PRACTICE

Infective Endocarditis
 April 11, 2013 | B. Hoen and X. Duval

Diagnosis of endocarditis is usually based on clinical, microbiologic, and echocardiographic findings. Treatment involves antimicrobial therapy targeted to the identified organism. Surgical indications include heart failure, uncontrolled infection, and prevention of embolic events.

CASE RECORDS OF THE MASSACHUSETTS GENERAL HOSPITAL

A Boy with Fever and Abdominal Pain
 April 11, 2013 | D.P. Ryan and Others

A 4-year-old boy was admitted to this hospital because of fever and abdominal pain. Imaging revealed a periaepiploic mass; purulent fluid was aspirated. Symptoms resolved with antibiotics. One week later, symptoms recurred. A diagnostic procedure was performed.

IMAGES IN CLINICAL MEDICINE

Pneumatosis Intestinalis
 April 11, 2013 | T. Adar and K. Paz

A 63-year-old man presented for a screening colonoscopy. During the colonoscopy, several submucosal polypoid lesions, 3 to 8 mm in diameter, were noted in the splenic flexure.

PubMed (MEDLINE)

<http://www.ncbi.nlm.nih.gov/>

The image displays three overlapping screenshots of the PubMed website interface, illustrating the search process and results.

Top Screenshot (PubMed Home): Shows the NCBI logo, navigation links (Resources, How To), and a search bar. The search bar contains the text "journal of urology".

Middle Screenshot (Search Results for "journal of urology"): Shows the search results for "journal of urology". The results are displayed in a list format, including article titles, authors, and publication details. The search bar contains the text "journal of urology".

Bottom Screenshot (Search Results for "journal dentistry"): Shows the search results for "journal dentistry". The results are displayed in a list format, including article titles, authors, and publication details. The search bar contains the text "journal dentistry".

The interface includes various filters and options, such as "Display Settings", "Filters", and "Related searches". The results are sorted by "Recently Added" and displayed in a list format.

Gallstone ileus: a diagnostic challenge by plain radiography

A 49-year-old woman with no surgical history had abdominal pain and fullness for 3 days. Initially, the pain was localised at the epigastric area, and on the third day the pain had become severe and generalised. On presentation, the patient had rigorous nausea and vomiting with normal vital signs. Physical examination revealed a soft abdomen with tenderness on the epigastric area. A plain radiograph of the abdomen showed marked dilatation of small bowel loops (figure 1, Left). To investigate the

cause of ileus, CT was performed, which revealed intrahepatic pneumobilia and an ovoid mass with laminated calcification lodged in the distal ileum with dilatation of bowel loops proximal to the lesion (figure 1, Right, arrow). A diagnosis of gallstone ileus was made and a pigmented gallstone about 3 cubic centimetres was removed from the terminal ileum after an emergent explorative laparotomy.

To reduce complications, prompt diagnosis of the disease and early surgical interventions are vital. This case emphasises that gallstone ileus should still be carefully ruled out in patients presenting with intestinal obstruction when no radiopaque calculus is visible as the majority (>80%) of gallstones are not sufficiently calcified to be detectable on plain radiography.

DRIVER: Networking European Scientific Repositories

Considered the largest initiative of its kind in helping to enhance repository development worldwide, DRIVER is a multi-phase effort whose vision and primary objective is to create a cohesive, robust and flexible, pan-European infrastructure for digital repositories, offering sophisticated services and functionalities for researchers, administrators and the general public.

DRIVER has established a network of relevant experts and Open Access repositories. DRIVER-II will consolidate these efforts and transform the initial testbed into a fully functional, state-of-the art service, extending the network to a larger confederation of repositories. DRIVER is integral to the suite of electronic infrastructures that have emerged in the worldwide GÉANT network and is hence funded under the e-Infrastructures call of the European Commission's 7th framework programme. It aims to "... optimise the way the e-Infrastructure is used to store knowledge, add value to primary research data and information making secondary research more effective, provide a valuable asset for industry, and help bridging research and education."

The objectives of DRIVER-II, the second phase of the project, include efforts to expand, enrich, and strengthen the results of DRIVER, in the following areas:

- strategic geographic and community expansion by means of the DRIVER confederation
- establish a robust, scalable repository infrastructure accompanied by an open source software package D-Net
- broader coverage of content through the use of enhanced publications
- advanced end-user functionality to support scientific exploration of complex digital objects

BioOne Advanced Search

To access publisher-designated fees for BioOne content, use the advanced search using one or more of a variety of criteria: DOI, and figure and table captions.

Author search: searches for the author in this field will not find authors.

Article or chapter title search:

Abstract search: searches text in the abstract.

Full text search: searches text for the full text of the article.

DOI search: searches full or partial DOI; your results will include all articles with that DOI.

Figure & table captions search: searches figures, and tables.

You may also designate whether you want selected titles only. If you do not have a selected title, you will produce Open Access content.

Finally, you may limit your search to a specific date range.

For more advanced searching tips, see the BioOne Search Help page.

of the decomposition, we filtered the reconstructed data sets using bilateral filtration (BF) before performing decomposition. 'Classic' BF (Tomasi and Manduchi 1998) denoised the reconstructed volumes while conscientiously preserving edges by performing the following operation at each voxel:

$$f'(x) = \frac{\sum_{y=1}^n f(x, y) D(y) R(x, y)}{\sum_{y=1}^n D(y) R(x, y)}, \quad (2)$$

where x referenced the current volume coordinate (current voxel), y referenced the filter kernel coordinates relative to x (i.e. kernel coordinates centered on x), n was the number of elements in the kernel, $f(x, y)$ was the image intensity in the filter kernel around x , and where $f'(x)$ was the intensity at x in the filtered result. In other words, equation (2) took the form of a discrete convolution of $f(x)$ with two kernels, $D(y)$ and $R(x, y)$, and with appropriate normalization. $D(y)$ was a shift invariant function of distance from the center of the filter kernel (the domain), and $R(x, y)$ was a function of radiometric distance from $f(x)$ (the range). Based on the results presented in (Clark *et al* 2012), $D(y)$ was constructed with constant weights within a radius of 6 voxels (a 'Flat' domain) and zero elsewhere. $R(x, y)$ was computed independently at each x as follows:

$$R(x, y) = \exp \left(- \frac{[f(x, y) - K(y)f(x, y)]^2}{2 * (m * \sigma_w)^2} \right), \quad (3)$$

where the variance of the Gaussian range weights was the product of σ_w , the standard deviation (SD) of the noise in water (HU), and m , the desired amount of smoothing to be performed. Parameterizing the level of smoothing with m was done to facilitate comparisons between filtered volumes with different initial noise levels; however, for these experiments, we used
